<th>Mental Health in Extreme Weather Situations</th>
<th>Mental Health and Climate Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Disruptive weather events cause stress and can lead to more severe mental health disorders, like PTSD or depression.</td>
<td>• Climate change causes stress about present and future losses of space, culture, and earth.</td>
</tr>
<tr>
<td>• Extreme weather events lead to isolation, economic loss, disruptions to work, and homeowner worries.</td>
<td>• As extreme weather events happen more frequently due to climate change, the stress on daily routines will become more severe.</td>
</tr>
<tr>
<td>• Extreme heat is dangerous to people's mental health and can cause increased use of alcohol, higher admissions to hospitals, and overall more aggressive behaviors.</td>
<td>• Exposure to pollutants and poor air quality is also linked to negative health impacts.</td>
</tr>
<tr>
<td>• Groups that are more vulnerable to weather-related disasters will often see harsher impacts on their mental health.</td>
<td>• Climate change can feel like an overwhelming, unsolvable problem. People sometimes cope with denial or pessimism.</td>

Climate Events Affect People with Pre-existing Mental Health Conditions in Specific Ways

- Psychiatric medication can make it more difficult for someone’s body to regulate temperature, causing unsafe fluctuations in temperature.
- People with mental health disorders are more likely to depend on services, medication supplies, and infrastructure, which can all be disrupted by extreme weather events.
- Disruptions in daily routine can also take a toll, especially for younger kids.

What To Do and How To Help

- Know the warning signs of mental and emotional distress: overwhelming sadness, changes in appetite/activity, difficulty concentrating or sleeping, increased use of drugs/alcohol, and physical ailments like headaches.
- Check in with those who may be isolated during an extreme weather event.
- Advocate and take action. Find a local environmental justice organization and take part. Ask a friend to join you!
- Take care of your body: stay hydrated and try to exercise. Reconnecting with nature through hikes, walks, and runs can help your mental health.
- Don't be afraid to ask for help. Climate stress is legitimate.
- During a disaster, prioritize your mental health treatment if possible.
- Take a step away from constant news and updates. While staying up-to-date is good, there's no need to bombard yourself with depressing information.

For Mental Health Resources

- SAMHSA helpline at 1-800-985-5990.
- National Suicide Prevention Hotline: 1-800-273-TALK (8255)
- Talk to someone you trust: pastor, parent, teacher, friend, etc...
